

Mohammad Rashed Sabra

Head of Product & Technology
Darmstadt, Germany | rashed.sabra@gmail.com

PROFILE

Product and technology leader with a strong software engineering background, combining complex software delivery, applied AI, and end-to-end product management. I build the structures that turn intelligent automation ideas into reliable product capabilities: clear product direction, technical decision-making, engineering ownership, quality practices, and release discipline.

Currently leading a cross-functional Product & Technology department across Product Ownership, Engineering, and QA, with focus on practical AI-assisted / agentic workflows where they improve requirements clarification, review quality, delivery consistency, and team knowledge sharing.

CORE AREAS

- | | | |
|---|---|---------------------------------------|
| ▪ Product strategy & roadmap governance | ▪ Engineering & architecture leadership | ▪ QA integration & release governance |
| ▪ Cross-functional team building | ▪ AI-enabled automation & SDLC | ▪ CI/CD & release traceability |
| ▪ Stakeholder alignment & communication | ▪ Agile & Scrum | ▪ Technical decision-making |

EXPERIENCE

WIANCO OTT Robotics GmbH | Darmstadt, Germany | Nov 2022 – Present

Head of Product & Technology

- Lead Product & Technology across Product Ownership, Engineering, and QA, defining the operating model that connects roadmap, backlog ownership, sprint discipline, quality practices, release readiness, and delivery accountability.
- Led the technical direction and product definition for new AI-enabled platform capabilities, balancing product value, system design, secure deployment, maintainability, and readiness for enterprise environments.
- Designed QA integration workflows and quality standards before the formal QA function was fully established, making testing and release readiness part of the delivery lifecycle rather than a late-stage checkpoint.
- Drove positioning of the intelligent automation platform against no-code and RPA alternatives, focusing on on-premise deployment, privacy, and cognitive automation for enterprise and public-sector environments.

Head of Software Development

- Defined the engineering operating model: team structures, sprint cadence, backlog governance, review standards, and delivery accountability; raising ownership and reducing dependency on individual contributors.
- Organized two parallel Scrum teams working on separate major products, using shared delivery standards, independent sprint rhythms, and cross-team coordination.
- Introduced AI-assisted / agentic development practices, including coding-agent standards, AI-supported code review, and structured project contexts for more consistent specification, review, and delivery.

Technical Product Manager

- Built the product management practice for platform products: backlog structure, epics and stories with acceptance criteria, sprint planning, and structured release documentation.
- Owned design and delivery of AI-integrated platform capabilities, including model training and inference concepts integrated into the workflow-authoring environment.
- Took ownership of release management through CI/CD, improving release cadence and traceability from requirements through branches to release notes.
- Led computer vision improvement work from research through implementation, improving reliability in visual and object detection.
- Architected the transformation of a core product into secure unattended execution mode for enterprise deployment, addressing configuration access, database encryption, and VDI compatibility.

Software Engineer

- Stabilized and improved platform quality through refactoring, legacy issue resolution, and delivery across C# and Python.
- Identified and filled a product ownership gap, bridging engineering execution and product direction before a formal product function existed.

L-One Systems GmbH | Darmstadt, Germany | Mar 2020 – Jul 2022

Lead Software Engineer

- Developed an ESA-funded AI-powered e-learning platform for thermal and mechanical engineers, combining conversational assistance with web-based 3D visualization; took ownership beyond implementation through architecture, coordination, and cross-team technical communication.
- Built robotics simulation and CAD-processing capabilities, including path planning from CAD models and STEP-to-IGP/STL conversion using C++, Qt, and Open Cascade.

Omniya L.L.C | Damascus, Syria | Apr 2018 – Mar 2020

Machine Learning / NLP Engineer

- Developed ML/NLP solutions for social media analytics, transforming Arabic user-generated content into market and audience insights.
- Built production-oriented Arabic NLP models for sentiment analysis, text classification, emotion detection, name-gender prediction, POS tagging, and named entity recognition.
- Maintained Django-based backend services supporting model integration and data-processing workflows.

SELECTED HIGHLIGHTS

Engineering organization & ownership — Structured a growing engineering team, clarified responsibilities, coached ownership, and reduced dependency on single key contributors.
Enterprise execution model — Contributed to secure unattended intelligent automation for enterprise deployment scenarios, including encrypted configuration handling and VDI compatibility.

Platform direction — Translated intelligent automation ideas into product direction, technical decisions, and delivery plans balancing customer value, feasibility, and maintainability.
AI-assisted / agentic SDLC — Introduced practical workflows for requirements clarification, code review, team knowledge sharing, traceability, and delivery consistency.

EDUCATION

Master’s degree, Artificial Intelligence · Higher Institute of Applied Sciences and Technology (HIAST), Damascus, Syria (2018–2021)
Graduated 1st in the master’s programme. Research focused on applied deep learning and Arabic NLP, including relation extraction, ontology learning, social graph analysis, and lexical pattern extraction for low-resource Arabic text.

Bachelor of Computer Science, AI & NLP · Damascus University, Damascus, Syria (2013–2018)
Built a strong foundation in computer science, machine learning, NLP, algorithms, and software development.

LANGUAGES

Arabic: Native / bilingual **English:** Professional working proficiency **German:** B1
