

Mohammad RASHED SABRA

rashed.sabra@gmail.com

Head of Software Engineering with a track record of building and leading multi-disciplinary engineering teams—software, communications, and robotics—to ship secure, production-grade systems at high quality. I work hands-on until teams are fully staffed—writing code, standing up pipelines, and prototyping tools—then formalise roles and scale delivery. My background spans secure SDLC on .NET/Python, simulation/3D, and applied text intelligence for decision support (misinformation signals, trend & sentiment by topic/region, entity mapping). I specialise in turning theoretical structures into working capabilities, and can stand up an internal dev cell to accelerate execution.

EXPERIENCE

WIANCO OTT Robotics GmbH, Head of Software Engineering

Darmstadt, Germany | NOV 2022 - PRESENT

- **Multi-team leadership:** lead delivery across software (RPA/Cognitive AI), internal web platforms; align roadmaps with operations.
- **Hands-on until fully staffed:** design architecture, write C#/ .NET code, stand up CI/CD, and ship small production increments—then formalise roles and delegate.
- **Team formation & coaching:** sprint planning, stand-ups, reviews/retros; configure Jira workflows and coach the team on Agile practices.

L-One Systems GmbH, Software Engineer

Darmstadt, Germany | MAR 2019 - JUL 2022

- Developing an E-learning platform for Thermal/Mechanical engineers powered by Chatbot and a web-based 3D visualization scene. Funded by the European Space Agency (ESA).

(Python, Django, TensorFlow, Open Cascade).

- Developed a CAD-based robot path planning and simulation platform.
- Developed Geo-Assist, which is a tool to convert the neutral 3D data format STEP into the triangulated format IGP and STL.

(C++, QT, Open Cascade)

EDUCATION

Higher Institute of Applied Sciences and Technology (HIAST)

Damascus, Syria | DEC 2018 - DEC 2021

Master's degree, specialized in Artificial Intelligence

Damascus University

Damascus, Syria | SEP 2013 - SEP 2018

Bachelor of Computer Science, specialized in Artificial Intelligence and Natural Language Processing

PROJECTS

- **Arabic Relation Extraction (NLP):** Built deep-learning models to extract semantic relations from Arabic text for decision support and knowledge graphs.
- **Arabic Ontology Learning (NLP):** Automated ontology induction for Arabic—concept discovery, relation drafting, and iterative refinement using ML/NLP.
- **Influential Users Detection (Social Graph Mining):** Identified high-impact social-media accounts using data-mining and graph-centrality propagation signals.
- **Antonym Extraction (Bootstrapped Hearst Patterns):** Detected antonymy in Arabic corpora via pattern bootstrapping to enrich lexical resources.

SKILLS

- Machine Learning
- Python
- NLP
- Django
- Data Mining
- Open Cascade Technology
- NLG
- Scikit-learn
- NLTK
- TensorFlow
- C++
- MySQL

LANGUAGES

- **Arabic** Native or bilingual proficiency
- **English** Professional working proficiency
- **German** Elementary Proficiency

ACHIEVEMENTS

1st place in the **Master's** program.
